Caroline Bradley
Business Analyst at Version 1

Business Analyst – Version 1

Master of Science International Business – University of Ulster
Postgraduate Diploma Business Systems Analysis and Design – LYIT
Postgraduate Diploma – Financial Services Technologies – LYIT
Honours Degree – Business Administration (IT)

What does your typical day look like?

A typical day would involve me doing business analysis work for the Public sector client I am engaged with. This could involve meetings which are conducted via Zoom and other online meeting tools. I also have lots of communication with the Version 1 team and get involved in their many interesting initiatives and engagements such as the NW Hub and the Diversity team.

What are you currently working on?

I am a business analyst for a Public sector client. I am also working with Lorna McAdoo, who is the NI Head of Operations , on a NW Hub initiative which aims to recruit people from the NW and expand the Version 1 footprint into this region.

What inspired you to join this company in particular?

I liked the fact that they had a set of good core values in place and had awards for being a best place to work.

Did you always want to work in this industry (tech)?

It was an area that I got the opportunity to get into later in life as I was a mature student.

Caroline Bradley

Business Analyst at Version 1

What's your favourite part about your work?

My work can be interesting and varied. I currently work from home in the NW of Ireland however I still feel very much part of the wider Version 1 team and enjoy the team camaraderie. I also have a great relationship with the Public sector organisation I am working with which I enjoy.

What would you say to other people considering a job in this industry (tech)?

I would say that it can be a very worthwhile and interesting career. It can enable them the opportunity to be involved in lots of diverse areas of work. It can also offer a lot of work flexibility too such as the opportunity to work remotely.

What do you consider to be the most important tech innovation or development in recent years?

I would say that smart phones have given people access to immediate real time information.

What tech gadget could you not live without?

I would miss my smart phone for google maps etc.
